## POWER DERATING CURVE

## SINGLE SURGE PERFORMANCE

## SURGE POWER DERATING CURVE

### Notes:

- SINGLE SURGE PERFORMANCE graph is good for NON REPETITIVE applications operating in an ambient temperature of 70°C or less. For temperatures above 70°C, the graph must be derated further linearly down to zero at 125°C.
- To determine applicable surge power in continuous-surge applications:
  1. Identify allowable duration and peak power P<sub>surge</sub> of single surge;
  2. Determine ratio of surge duration/surge OFF time in application;
  3. Calculate P<sub>applicable</sub> backwardly according to Y-axis of SURGE POWER DERATING CURVE.
